IMPLEMENTATION OF CLUSTERING TECHNIQUES K - MEANS

AIM:

To implement a K-means clustering technique using Python language.

EXPLANATION:

- Import KMeans from sklearn.cluster
- Assign X and Y.
- Call the function KMeans().
- Perform scatter operation and display the output.

SOURCE CODE:

```
Import numpy as np
import pandas as pd
from matplotlib import pyplot as plt
from sklearn.datasets.samples generator import make blobs
from sklearn.cluster import KMeans
X, y = make blobs(n samples=300, centers=4, cluster std=0.60, random state=0)
plt.scatter(X[:,0], X[:,1])
wcss = []
for i in range(1, 11):
      kmeans = KMeans(n clusters=i, init='k-means++', max iter=300, n init=10,
random state=0)
      kmeans.fit(X)
      wcss.append(kmeans.inertia)
plt.plot(range(1, 11), wcss)
plt.title('Elbow Method')
plt.xlabel('Number of clusters')
plt.ylabel('WCSS')
plt.show()
kmeans = KMeans(n clusters=4, init='k-means++', max iter=300, n init=10,
random state=0)
pred y = kmeans.fit predict(X)
plt.scatter(X[:,0], X[:,1])
plt.scatter(kmeans.cluster centers [:, 0], kmeans.cluster centers [:, 1], s=300, c='red')
plt.show()
```

OUTPUT:

RESULT:

Thus the program to implement a K - Means clustering technique using Python language is successfully executed.
